Component/OEM

OUTLINE

The XC-999/XC-777A is an ultra-compact integrated camera module that has been developed for multimedia utilizing the latest surface mount technology. The XC-999/XC-777A is designed so that a video output signal can be obtained by only providing a power supply of 12 Vdc. It cannot only be easily installed in a limited space, but also is very suitable for outdoor use. The XC-333 is an ultra-compact remote head color camera that is widely used in the industrial field. The subminiature CHU block can be easily installed in limited spaces, the square head being precisely manufactured to ensure accurate alignment of the CCD. The XC-333 is also a highly functional DSP camera that can be controlled by RS-232C. The RGB signals can be adjusted separately and the AE mode can cope with a wide range of illumination. These three models use a unique NF mount lens system which can be converted into a flexible C mount lens.

LONG EXPOSURE

Long exposure allows high sensitive image capture by long time integration using electronic shutter.

WE pulse is output from "WE OUT connector" on the rear side of CCU. WE pulse is useful to know the timing when capturing image using equipment such as memory.

Effective period of outputting to WE pulse is 2FLD~512FLD.
